

Global average annual nutrition-specific disbursements to the WHA nutrition targets (2015 - 2016)

\$102 M
↓
WHA Decrease

- 72% (2015) and 79% (2016) of country-level WHA disbursements went to 37 highest stunting burden countries
- \$1.71 (2015) and \$1.52 (2016) per child under 5 was disbursed by donors to the WHA nutrition targets
- On average, 77% of donor disbursements shown went to the priority package of interventions
- On average, \$6.53 per stunted child under 5 was disbursed to contribute to the WHA nutrition targets

This profile was prepared by a team at Results for Development (R4D). For questions or comments please contact Kyle Borces (kborces@r4d.org) and Emily Thacher (ethacher@r4d.org). This dashboard reports the 2015 and 2016 nutrition-specific donor disbursements aligned with the WHA nutrition targets, as defined by the Investment Framework for Nutrition (World Bank, 2017). While investments in the enabling environment and nutrition-sensitive activities are critical to achieve the WHA targets, disbursement data is currently unavailable. Refer to the technical report for documentation of the methodology/assumptions. Disbursements across the WHA targets cannot be summed due to intervention overlap. All figures represent gross disbursements and are in constant prices (2015) in USD millions unless otherwise stated. *Please note that school feeding was removed from the basic nutrition purpose code for the 2016 reporting year, which resulted in a significant decrease in non-WHA disbursements.

2016 donor spending towards the WHA targets: actual versus additional need (billions USD)

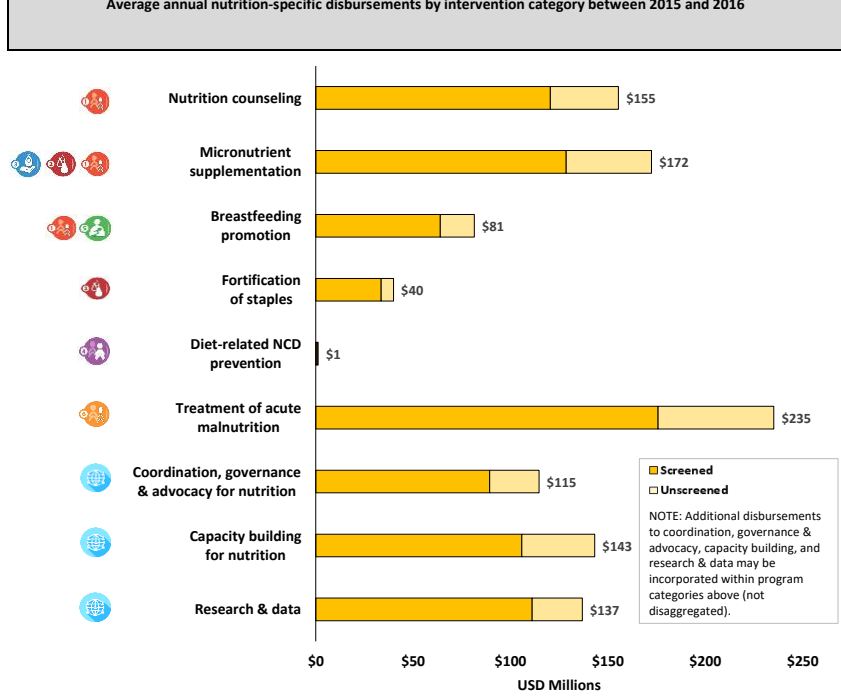

Annual total donor contributions needed to achieve the 2025 WHA Nutrition Targets as outlined by the Investment Framework for Nutrition (billions USD)

Average nutrition-specific disbursements towards the WHA nutrition targets

Target Name	2015 - 2016 average (with uncertainty range)
1 Stunting	\$409 M (\$247 M - \$480 M)
2 Anemia	\$121 M (\$15 M - \$134 M)
3 Low Birthweight	\$30 M (\$4 M - \$37 M)
4 Overweight	\$1 M (\$0 M - \$1 M)
5 Breastfeeding	\$81 M (\$55 M - \$102 M)
6 Wasting	\$235 M (\$152 M - \$314 M)
Above-Service Delivery	\$395 M (\$328 M - \$433 M)

Average annual nutrition-specific disbursements by intervention category between 2015 and 2016

Average annual nutrition-specific disbursements to the WHA nutrition targets by recipient region

Annual nutrition-specific disbursements to the WHA nutrition targets by recipient income group and channel (2015-16 average)

For readability, Europe & Central Asia region was excluded from this figure. Europe/Central Asia received an average of \$3 M in WHA target disbursements across 2015 and 2016.

Channels are defined by the CRS, as reported by donors. NGOs = non-governmental organizations; PPPs = public-private partnerships. NGOs includes local and donor-country-based NGOs.

Top 10 donors that channeled nutrition-specific disbursements to the WHA nutrition targets (average annual disbursements, 2015 - 2016)

These top 10 donors contributed an average of 93% of all disbursements to the WHA nutrition targets and 92% of total nutrition disbursements (WHA disbursements plus other basic nutrition disbursements) across 2015 and 2016. World Bank includes IDA and IBRD disbursements (80% and 20% of the WHA-adjusted total shown, respectively), which are reported separately in the CRS. Differences between these OECD data (based on World Bank reporting) and data published by the World Bank for economic sectors and themes (i.e., purpose of activities), are due to the use of different classification systems. For the multilateral organizations shown (EU institutions, World Bank, UNICEF), dollar values represent core disbursements only.

Top 10 recipient countries that received nutrition-specific funding for the WHA nutrition targets (average annual disbursements, 2015 - 2016)

Top 10 countries of 125 total recipient countries receiving global nutrition aid for the WHA nutrition targets across 2015 and 2016. These top 10 countries received an average of 40% of all disbursements to the WHA nutrition targets. Figure excludes the following categories that are among the top ten recipients that are not countries: "bilateral, unspecified" (\$132m - rank 1) and "South of Sahara, regional" (\$32m - rank 8). Contributions to all remaining recipients totaled an average of \$644 M. Note that Peru only received about \$2.4 M in 2016, which is in stark contrast to 2015 when Peru received a \$53 M IBRD loan.

Supplemental Information - Global donor disbursements to the WHA nutrition targets across 2015 and 2016

Other basic nutrition disbursements (not counted toward the WHA nutrition targets)

\$332 M

Other Disbursements in Basic Nutrition

NOTE: This section reports all additional disbursements within the basic nutrition purpose code that do not fit within the WHA target framework as defined by the Global Investment Framework for Nutrition. Additional disbursements to these intervention categories may exist outside of basic nutrition (not captured here).

"Other nutrition sensitive" intervention includes: food safety, salt iodization, resilience/income generation related activities, nutrition delivered through infectious disease programs, deworming, and nutrition delivered through cash transfer programs. These activities were identified within the basic nutrition purpose code.

School feeding was removed from the basic nutrition purpose code as of the 2016 reporting year. In 2015, the basic nutrition purpose code contained \$215 M of disbursements towards school feeding. In 2016, that total was reduced to \$24 M.

All purpose codes identified as including investments toward the WHA nutrition targets globally in 2015 and 2016

Purpose Code	Average annual disbursements to WHA nutrition targets	Average annual share of purpose code counted towards WHA targets
Basic nutrition	\$663 M	67.2%
Emergency food aid	\$104 M	2.4%
Reproductive health care	\$60 M	3.1%
Food aid/Food security programmes	\$59 M	4.0%
Material relief assistance and services	\$47 M	0.3%
All other purpose codes	\$146 M	0.1%
TOTAL funding to WHA targets	\$1.08 Billion	

NOTE: This data is based on qualitative screening of 77% of disbursements shown in this dashboard by all donors in 2015 and 2016. This represents an average of 1109.5 financial transactions. See accompanying methods document for further details.

Nutrition projects flagged with the OECD gender marker

Legend:
 ■ Average annual disbursements flagged as contributing to women's empowerment
 ■ Average annual disbursements not flagged as contributing to women's empowerment

Total global basic nutrition disbursements over time (2008-2016)

Total disbursements include "Official Development Assistance," "Other Official Flows" and "Private Grants" as reported by the CRS. The majority of disbursements within "Other Official Flows" come from Development Banks and represent loans with a grant element greater than 25%.
 *Please note that the dashed line represents basic nutrition disbursements as % of total disbursements if 2015 school feeding disbursements were kept constant for 2016, which would result in an overall increase between 2015 - 2016.
